

## JIM5 [Anti-Homogalacturonan] Antibody (Lot 190301a)

**AB-JIM5**

**04/19**

### I. DESCRIPTION:

The JIM5, rat, monoclonal antibody recognises the  $\alpha$ -1,4-linked homogalacturonan domain of pectic polysaccharides. It has no known cross-reactivity with other polymers. It can recognise partially methyl esterified epitopes of pectic polysaccharides (homogalacturonan) in several species and also binds unesterified homogalacturonan.

LM19 is recommended for the detection of unesterified homogalacturonan.

*From the laboratory of Paul Knox, PhD, University of Leeds.*

**This product does not contain fetal bovine serum.**

### 2. SPECIFICATIONS:

<b>Antibody Name</b>	JIM5
<b>Antigen</b>	Pectic polysaccharide / Homogalacturonan
<b>Epitope</b>	Paritally methyl esterified and unesterified homogalacturonan
<b>Conjugate</b>	Unconjugated
<b>Buffer</b>	Serum-free cell culture supernatant, 0.02% sodium azide
<b>Tested Application</b>	Immunofluorescence (1:10); ELISA (1:10)
<b>Positive Control</b>	Polygalacturonic Acid (from Citrus Pectin) ( <a href="#">P-PGACIT</a> )
<b>Clonality</b>	Monoclonal
<b>Isotype</b>	IgG
<b>Host Species</b>	Rat

### 3. PROPERTIES:

<b>Form</b>	Liquid
<b>Shipping</b>	Shipped at ambient temperature
<b>Storage</b>	Short term stability: 2-8°C Long term stability: Below -10°C (Avoid freeze/thaw cycles)
